This 81- paged very well referenced book on AIDS titled AIDS: WHAT THE DISCOVERERS OF HIV NEVER ADMITTED, makes an interesting reading.

The book proposes that AIDS is caused by mycobacteria, such as TB and fowl Tuberculosis and not HIV as the world has been made to believe. The author buttresses his points with many references showing that Tuberculosis and atypical tuberculosis is not an opportunistic disease but that these conditions are a trigger for becoming HIV positive that results in AIDS.

I find this book very interesting and curious and I recommend it as a must read for all involved in the AIDS pandemic research.

I am of the opinion that this book may offer a solution to the mystery surrounding the AIDS pandemic with regards to a possible vaccine or cure for AIDS in the near future.

Finally the author should be congratulated for "daring where Angels feared to tread"

-PROFESSOR P S IGBIGBI

-PROFESSOR P S IGBIGBI
Professor Igbigbi is currently the Head of Department of Anatomy, College of Medicine, University of Malawi. He has 47 publications in referred journals, 4 published books in Human Anatomy, 11 chapters in Neuroanatomy textbooks and 39 published abstracts. He is a member and chairman, Editorial Board of Malawi Medical Journal (MMJ) and a reviewer

for many international journals. He can be contacted at pigbigbi@yahoo.com
