B. C

Review of books is one of the main sections of this journal. Books of forensic importance are regularly being reviewed by experts of international repute. However some books are of such paramount importance that we at the journal office thought one review may not be able to do justice to that book. One opinion may be slanted, perhaps by the individual tastes and preferences of the reviewer. Reviewers from different continents, nations, even different parts of the same nation may perceive a book differently. Why not send books to two or more different reviewers and get their opinion. We requested several publishers to do that and they obliged.

From Volume 3, Number 1, January - June 2002, we started reviews of certains books of paramount importance as "featured books". The first book to be featured on our journal was Ecotoxicology: The Study of Pollutants in Ecosystems by F. Moriarty (Published by Academic Press). Review of that book, as well as the combined index of reviews of all featured books can be accessed by clicking here. We have so far featured ***thirty*** *books (and multimedia) including the current one. The response of the readers has been overwhelming. They seem to have liked this new genre, and they want more reviews in this format. To see all books which have been featured in this journal so far, readers may want to the linked page (featured 001).*

This time we are reviewing a very good book Forensic Radiology, (1st edition) authored by B.G. Brogdon. Since it was a book on forensic radiology, we thought it would be best to send the book to a forensic pathologist as well as to a radiologist. The book was sent to two different reviewers - Puneet Setia, a forensic pathologist and Sumer Sethi, a radiologist.

Brogdon's Forensic Radiology
